

EXIDE, PLANTÉ

Some relationships are forever

Trust. Complete transparency. And dependability - these are the elements that build rock solid relationships. The very same elements that have made Plante' from Exide the first choice in generating plants, transmission stations and distribution sub-stations for over 50 years.

Plante' transparency shows through its see-through casing that enables round-the-clock charge monitoring. Its unique 99.99% pure lead plates give it unfailing stamina. And the strength to automatically regenerate itself - time after time. So there's no sudden death through capacity degeneration.

It's the reason why power engineers and Plante' share an unshakeable bond. Plante' from Exide. What you see is what you get.

Exide also designs and supplies anti-seismic battery stands and batteries for different seismic fault zones. Exide battery banks installed in all Indian Nuclear Power Plants have undergone seismic qualification tests at CPRI, Bangalore.

**EXIDE
PLANTÉ**

Conforms to IS 1652, BS 6290-Part 2 and IEC 60896-11. Manufactured at ISO 9001 & ISO 14001 approved factory.
